- ▶ Need for a standardized file format to exchange
 - ▶ measurement data sets
 - ▶ software gauges
- ▶ ISO 5436-2 defines a set of necessary records
- ▶ File format defined in ISO 5436-2 is not state of the art
 - ▶ mixed ASCII-binary
 - ▶ no compression
 - ▶ redundant information
 - ▶ not extensible

Advantages of X3P

- ▶ Using XML-format to store all records
 - ▶ Clear definition of data types and contents in XSD
 - ▶ Automatic testing of validity and integrity
 - ▶ Human readable for debugging purposes
 - ▶ Transparently extensible without losing compatibility
- ▶ Storage in compressed ZIP-Container
- ▶ Transparent storage of binary encoded mass data for improved performance

Advantages of X3P

- ▶ Platform independent
 - ▶ Lead development on Windows
 - ▶ Unix/Mac following
- ▶ Extensible
 - ▶ Excellent base for vendor specific data formats
 - ▶ Readable by all other systems
 - ▶ Protecting your secrets

Application of X3P

- ▶ Universally applicable
- ▶ Line **and** area data
- ▶ View oriented data from camera based 3D-scanners can be stored in topologic order!
- ▶ Unsorted point clouds from (CMMs, etc.)
- ▶ Multi-layer Systems

Easy use of X3P

- ▶ Open source implementation freely available at: www.opengps.eu
- ▶ DLL-Version with ANSI-C interface (high binary compatibility)
- ▶ Link-Library (easy in your project)
- ▶ Transparent and easy access to 3d-coordinates independent from the internal representation of coordinates
- ▶ Full access to XML-document structure for extended control

X3P Container

ZIP Container (.x3p)

main.xml

```
<p:IS05436_2 xmlns:p="http://www.opengps.eu/2008/IS05436_2"
  xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
  xsi:schemaLocation="http://www.opengps.eu/2008/IS05436_2 I
  <Record1>
    <Revision>IS05436 -- 2000</Revision>
    <!-- "SUR" for surface or "PRO" for profile -->
    <FeatureType>SUR</FeatureType>
    <!-- Axis description -->
    <Axes>
      <CX>
        <!-- "I" for Incremental, "A" for Absolute -->
        <AxisType>I</AxisType>
        <!-- Datatype: "I" for int16, "L" for int32, "F" for float32 -->
        <DataType>D</DataType>
        <!-- Increment is the length of one increment in Meter -->
        <Increment>1.601600000000000E-0002</Increment>
        <!-- The offset of the incremental axis -->
        <Offset>0.000000000000000E+0000</Offset>
      </CX>

ISO 5436-2 XML Main Document: The big picture

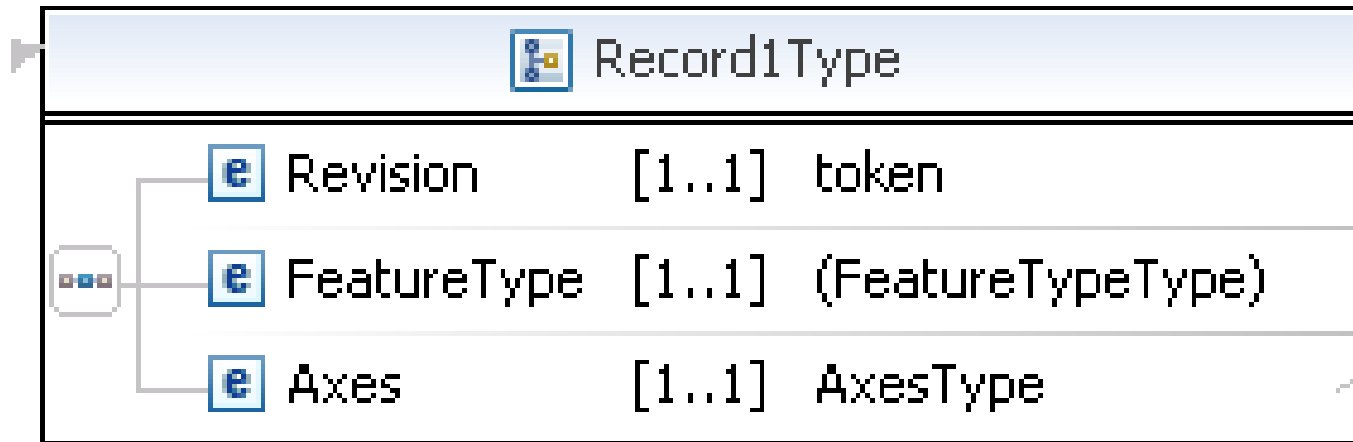

ISO 5436-2 XML-Format Record Organisation

- **Record1: Coordinate System**
- **Record2: Meta information**
- **Record3: 3D-Data**
- **Record4: Checksum**
- **VendorSpecific: Extension hook**

ISO 5436-2 XML-Format

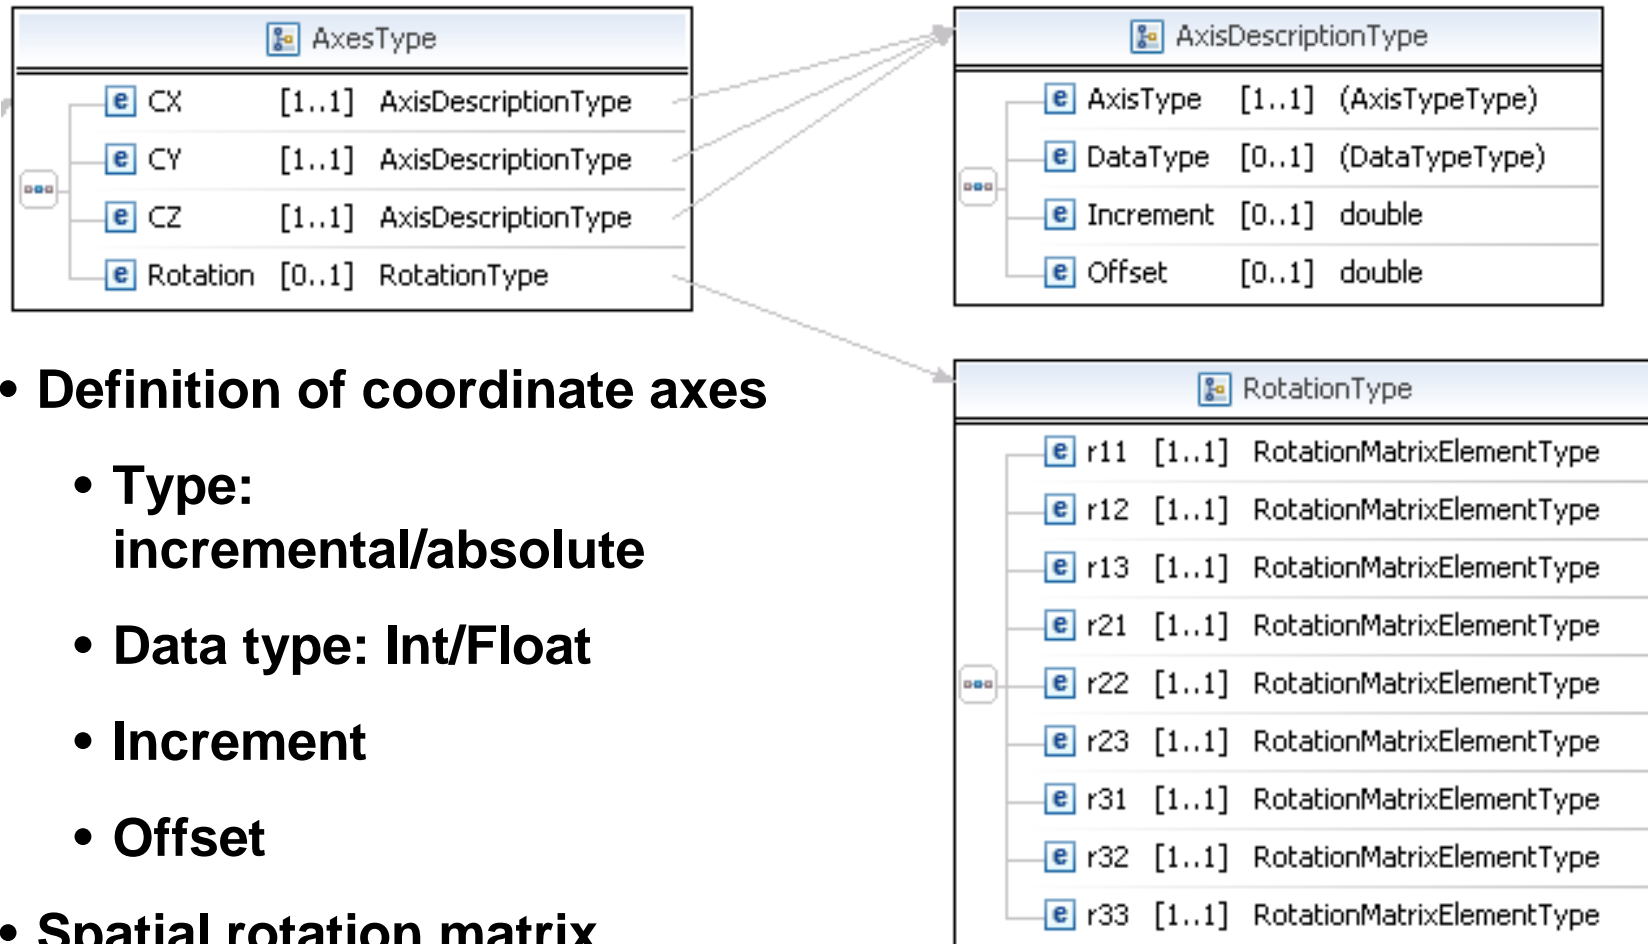

Record 1: Coordinate System

- ▶ File Format Revision
- ▶ Feature Type (3D-surface or 2D-profile)
- ▶ Coordinate system and data type definitions

ISO 5436-2 XML-Format

Record 1: Coordinate System

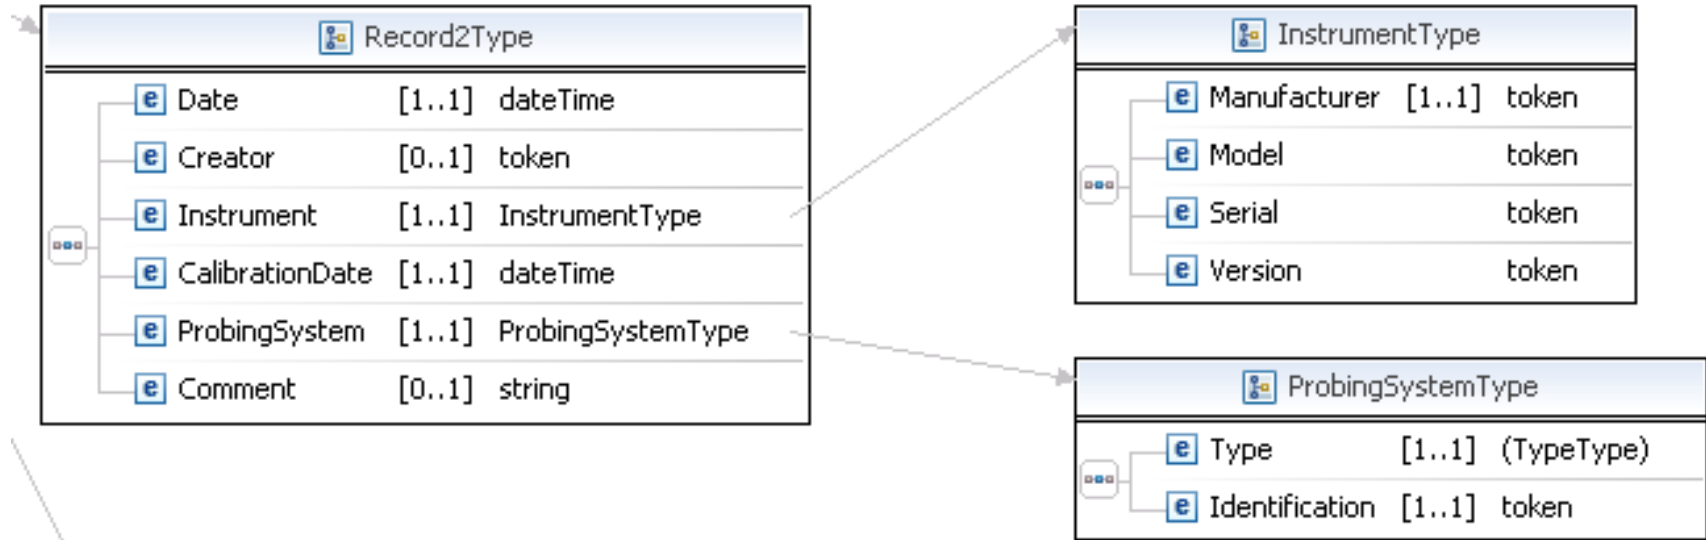

- **Definition of coordinate axes**

- **Type:**
incremental/absolute
- **Data type:** Int/Float
- **Increment**
- **Offset**

- **Spatial rotation matrix**

ISO 5436-2 XML-Format:

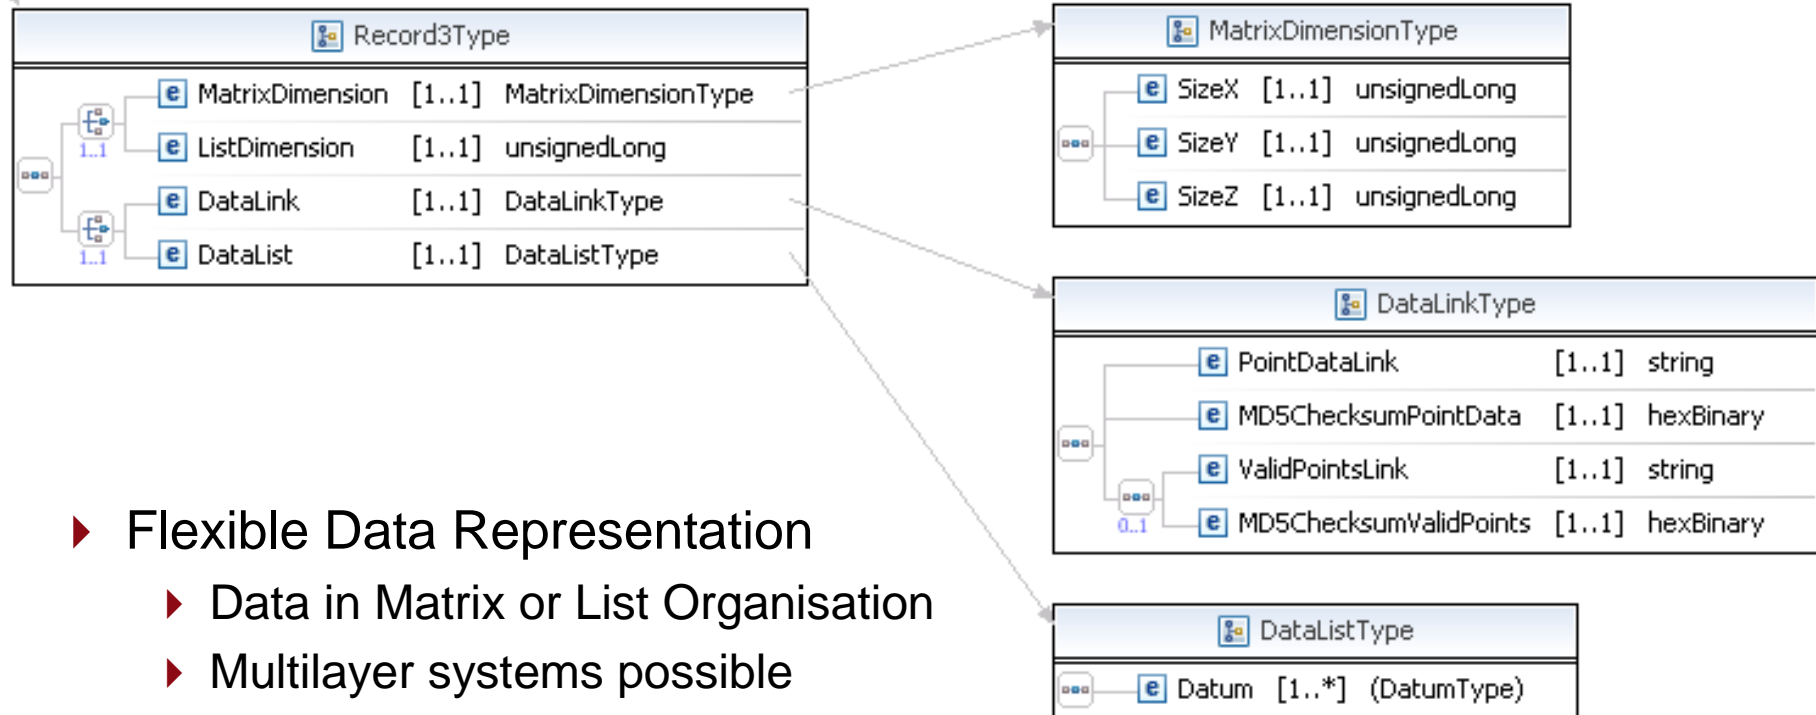

Record 2: Meta Information

- ▶ Date of Measurement or creation
- ▶ Creator
- ▶ Instrument type and identification
- ▶ Calibration information

ISO 5436-2 XML-Format:

Record 3: 3D-Data

- ▶ Flexible Data Representation
 - ▶ Data in Matrix or List Organisation
 - ▶ Multilayer systems possible
- ▶ Binary Storage of Mass Data
- ▶ MD5-Checksums
- ▶ Validity Information for each Point

ISO 5436-2 XML-Format

Record4 / Extensions

- ▶ Record4: Checksum
- ▶ VendorSpecific: Extension hook for all vendor specific details

- ▶ Implementation finished
- ▶ Integration in NanoFocus and Alicona standard software
- ▶ Round robin test in progress
- ▶ Next Release scheduled for September 2008

Acknowledgement

- ▶ The implementation of ISO5436-2 X3P data format and this training document have been gratefully sponsored by NanoFocus AG, Germany
